ACHIEVE A GREAT VISUAL IMPACT WITH OUR THERMOSENSITIVE FEELCUP-INKS

VERSATILITY AND RETURN ON INVESTMENT

The reuseable cup has become omnipresent at whatever type of event thanks to its versatility and good carrier of publicity messages well received by the users and with great visual impact. The cups are a good investment as they generate a good financial and commercial return to event organizers offering various concept, offering local authorities advertising space on the cups, renting the cups or creating a collectors item one has to purchase. We expect you to earn back your investment relatively fast.

FIRST QUALITY MATERIALS

Our cups are produced of polypropylene with foodgrade certificate for alimentary use and are confirmed free of chlores and bisphenol. Polypropylene is ideal for reuseage and recycling adding the advantage of being lightweight and of high resistance and elasticity, the glass will not break falling on the ground or the floor. All our products are produced in Spain, guaranteeing an exclusive high quality.

THE BEST PRINTING TECHNIQUES

For the personalisation of our cups we use the best currently available printing techniques, from screenprinting and single colour print to full colour IML printing (with the printed label inside the mould) permitting personalisation of the cup at its complete 360° degree surface.

THERMOSENSITIVE FEELCUP INKS

Obtain a touch of exclusivity and distinguish yourself from others with our thermosensitive FeelCup inks what react and change colour with cold drinks at 6 degrees Celsius and hot drinks at 45 degrees Celsius. Thanks to its thermocromatic reaction it will reveal, by means of a change in colour, or an appearing message or image, when the liquid inside the cup is at its right temperature level.

YOUR PUBLICITY APPEARING AS BY MAGIC

THERMOSENSITIVE INKS THAT CHANGE OF COLOUR

GREAT VISUAL IMPACT AND EXCLUSIVITY FOR YOUR CUPS

REUSABLES AND RECYCABLES

REDUCE YOUR FINGERPRINT AND
PROTECT THE PLANET

WASHABLE IN DISHWASHERS

Our cups are produced in polypropylen and are suitable for cleaning in dishwashers prolonging their usage time, clean them and reuse them!

REDUCE WASTE

Reusable cups reduces waste by 80% caused by disposable cups.

RECYCLABLE AND SUSTAINABLE

Did you know that disposable cups take up to 800 years to be degraded in nature? Reuse to minimize waste and recycle to avoid it, let's make a more sustainable world.

LESS PLASTICS, LESS EMISSIONS

The reuse of reusable cups directly causes the effect of less required production of disposable cups significantly reducing the need of basic materials that generate CO² emissions in production processes and later on in the logistical chains by having to be transported.

ECONOMIZE IN CLEANING COSTS

The reuse of the cup avoids waste collection operations and as such economizes on the expenses of cleaning.

REUSE

RECYCLE

A SUSTAINABLE LIFE CYCLE

REUSE AND REYCLE, RESPECT THE PLANET

REDUCE WASTE AND ECONOMIZE ON EXPENSES

RECOLLECTIONABLE

PROFITABLE FOR THE EVENT ORGANISATION,
A NICE SOUVENIR FOR THE END USER

SAVINGS AND PROFIT SOURCE

With the printing of sponsors on the surface of the cup or by means of a simple cup recollection system for non returned cups, one can manage to cover the costs of the purchase of the cups including adding profits to the event.

HOW DOES THE CUP RECOLLECTION SYSTEM WORK?

1. GET YOUR CUP:

asking for a cup for the first time the user receives a reuseable cup personalised for the event, for this cup he pays a deposit (normally 1 Euro).

2. REUSE THE CUP:

During the event the cup is reused buying or asking for a drink.

3. RETURN YOUR CUP OR KEEP IT:

When the event ends you can return your reuseable personalised cup for collection or keep it as a souvenir of the event for daily use at home.

THE FIRST BIODEGRADABLE CUP OF THE MARKET

REDUCE YOUR ECOLOGICAL FOOTPRINT

- Our line of biodegradable products have the ability to decompose naturally and ecologically in a maximum period of 5 years and it does not pollute the environment, even it is transformed into compost for the earth.
- How do we get it? In the base material that we use for each of our products we incorporate an enzymatic additive that will perform the biodegradation function when conditions are favorable for it, (living organic matter of the soil, temperature and humidity), at this time the product biodegrades at 100% transforming into CO₂ + Biomass + H₂O.
- The Biodegradation option is applicable to a wide selection of our products, check Bio availability.
